

# ARTWORK WITH DRILL HOLES

## SUPPLYING ARTWORK FOR PRODUCTS WITH DRILL HOLES

### Hints & Tips

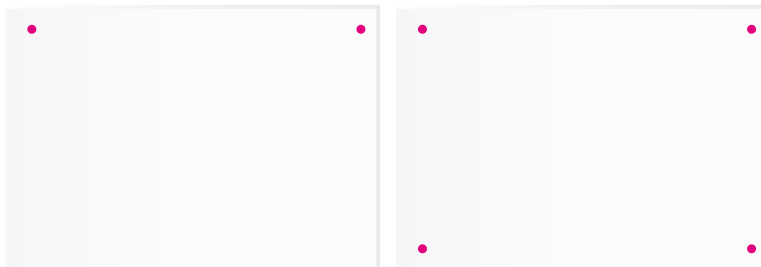

Drill holes are a finishing option for a number of our display and promotional products to allow print to easily be hung or fixed to surfaces. You can select one of the two options: drill holes applied to the upper two corners of the board or drill holes to be applied to all four corners.

If you have selected drill holes in 2 corners, this will be placed in the upper corners of the board. Please make sure orientation of artwork is supplied the correct way up for drill holes to be positioned in the required place.

A 5mm hole will be applied to the product 18mm from the edge to centre of hole. Our helpful templates indicate the positioning of these drill holes to help you place artwork in safe areas.

We ask that you take positioning of drill holes into consideration when designing artwork, ensuring important text (e.g. phone number and web address) are kept away from highlighted areas, to allow all text to be visible.
